Evolving a Data Infrastructure for the Future World of Energy

EnergieDienst

PROBLEM SOLVED

The German-Swiss energy provider needed a reliable, fast, and flexible data infrastructure to support new products and services.

CLIENT OUTCOMES

With NetApp® solutions, Energiedienst can implement a transformation strategy that saves money and energy, fosters climate neutrality, and serves 270,000 eco-conscious customers.

> "Energiedienst is transforming from a pure supplier to a full-service provider for local, renewable energies. We need to fulfill new requirements from new business areas and feel completely comfortable. With NetApp, we have always been able to deliver."

Andreas Rosenberg, Head of Infrastructure Services, Energiedienst AG

At Energiedienst, NetApp is the standard for data management. SAP systems, databases, file services, and virtualization all require high performance, stability, and availability. NetApp Snapshot™ technology, integrated with NetApp ONTAP® data management software, helps the IT team to control data protection. It also automatically saves the mission-critical SAP and Oracle instances and clones them to manage the system landscape fast and risk-free.

"With a NetApp unified architecture, consistent simplification, and flexible tools, we can meet growing requirements, even with scarce resources," says Andreas Rosenberg, head of Infrastructure Services at Energiedienst.

The business group is evolving from an electricity and gas utility to a trusted provider of sustainable energy solutions. To expand the service portfolio for private, commercial, and municipal customers, it has transformed internal processes digitally. Andreas Rosenberg and his team have adapted the data infrastructure accordingly.

As the company migrates to SAP HANA, the switch to NetApp all-flash systems will deliver the necessary performance improvements and greater storage efficiency. The current hybrid systems already reduce the amount of data so effectively that the team needs notably less storage capacity. The new systems will lower resource consumption even further, while massively increasing performance. Thus, Energiedienst can continue to shrink its CO_2 footprint and fulfill its commitment to climate neutrality.

SOLUTION COMPONENTS

NETAPP PRODUCTS

NetApp FAS Hybrid Flash Arrays

NetApp MetroCluster Business Continuity

NetApp ONTAP Data Management Software

PARTNER PRODUCTS
