

# FlexPod VDI for Remote Work Environments

Expand virtual and remote working capabilities supported with a simple, turnkey solution

VDI building blocks can be combined to scale to any number of virtual desktop users.

Our government is asking all non-essential workers to remain home and utilize virtual and remote work capabilities for the next several months. Does your organization have the capacity to meet the need?

NetApp and Cisco are offering government customers a validated Virtual Desktop Infrastructure (VDI) solution to support virtual and remote work capabilities. As government agencies face unprecedented challenges, FlexPod VDI is a proven technology that delivers virtual desktops and applications to support your workforce and ensure critical citizen services are delivered.

You can start small with a solution to support 500 concurrent workers and scale up. Or you can mix and match to support your entire agency and workforce.

NetApp and Cisco have partnered to deliver FlexPod, an on-premises, validated architecture that includes all hardware components (storage, servers, networking) required for a VDI environment. FlexPod VDI supports both VMWare and Citrix Licensing and other payment options are available.
