

YOUR ORACLE APPLICATIONS BELONG ON NETAPP

TOP 10 REASONS

- **1** **Ease database consolidation.** High performance with advanced manageability enables true database consolidation and savings on Oracle licensing.
- **2** **Capitalize on new business opportunities.** Accelerate quarter and year-end financial close and confidently run simulated close scenarios.
- **3** **Back up in seconds; restore in seconds.** NetApp can back up and restore databases, even at petabyte scale, in seconds to get you back in business when problems arise.
- **4** **Data protection everywhere.** Leverage integrated data protection that safeguards your data no matter where it resides or moves, across edge, core, and cloud. Build a zero data loss solution between your data centers or replicate to the cloud and build an on-demand disaster recovery environment.
- **5** **Efficiency.** Multiple storage efficiency technologies allow you to place more data in a smaller footprint. Create and replicate copies of your data based on changed data alone, to reduce demands on both storage capacity and network bandwidth.
- **6** **Manageability.** Policy-based quality of service (QoS) means that databases get the performance they need, and it also reduces costs by enabling you to safely consolidate workloads onto a single system. Run production and development side by side on the same system.
- **7** **Faster results.** Provision new environments in minutes with minimal work and no concern about hotspots. Roll out new services faster, test and fix bugs quicker, and give everyone the resources they need to do their job.
- **8** **Future proof.** Get virtually unlimited scalability and seamless, cost-effective movement of data across on-premises and cloud locations. Add technologies such as NVMe and AI nondisruptively. Extensive integration with Ansible and Kubernetes enables you to further automate for a more service-oriented IT infrastructure.
- **9** **Cloud integration.** Easily swap workloads to cloud and back, across your choice of on-premises, hybrid cloud, and multicloud environments. You can also tier less active data from your on-premises storage to the cloud, reducing costs while preserving centralized manageability of your data.
- **10** **Optimize efficiency.** NetApp® tools make it easy to understand consumption and costs, so you can optimize your storage infrastructure and store your data where it's most effective.

About NetApp

NetApp is the intelligent data infrastructure company, combining unified data storage, integrated data services, and CloudOps solutions to turn a world of disruption into opportunity for every customer. NetApp creates silo-free infrastructure, harnessing observability and AI to enable the industry's best data management. As the only enterprise-grade storage service natively embedded in the world's biggest clouds, our data storage delivers seamless flexibility. In addition, our data services create a data advantage through superior cyber resilience, governance, and application agility. Our CloudOps solutions provide continuous optimization of performance and efficiency through observability and AI. No matter the data type, workload, or environment, with NetApp you can transform your data infrastructure to realize your business possibilities. www.netapp.com
