CANDISPE | PROBLEM SOLVED

Optimisation of routes, itineraries and load shift times are Candispe's core aims in its digital transformation process.

Candispe deploys NetApp HCI technology to improve goods transport

Candispe entrusts the modernisation of its data management infrastructure to LIDER IT, an integrator partner for the implementation of NetApp's HCI (Hybrid Cloud Infrastructure) solution.

BUSINESS CHALLENGE

NetApp's technology has enabled Candispe to implement projects such as:

- Traceability of goods transport fleet
- Availability of data
- Business continuity
- High-performance scalable service

Candispe, the Global Transport Logistics Operator with over 90 years of experience in the Spanish and international transport industry, has taken another step in its digital transformation process, with data as the strategic element. In its business model, agility in exploiting data, and speed of response in obtaining information for processing and take decisions decision making are both key to getting receiving immediate and decisive responses, while maintaining availability and business continuity.

The main aim of the project is to manage the traceability of goods in order to deliver a top-quality

service to customers. It seeks to achieve cutting-edge innovation in goods transportation and management, optimisation of routes, itineraries and load shift times.

For this purpose, the company has opted for LIDER IT as the integrator of NetApp's HCI (Hybrid Cloud Infrastructure), the only hyper-convergent infrastructure solution that delivers real business class scaling. This enables Candispe to reach the highest standards of performance and availability to ensure constant and preventative tracking for its modern goods' road transport fleet from its operations control room in Madrid.

"The biggest advantage offered by the HCI solution is to execute the company's core applications with guaranteed performance, as well as providing a high-performance scalable service, backed by a high level of automation and integration with VMware," comments José Antonio Mancha Vega, Head of Organisation and Systems at Candispe.

Deploying the HCI model has been a leap forward in Candispe's vision and strategy. The result has

been enhanced performance and scalability, as well as optimisation of routes that now, thanks to NetApp's hyper-convergent solution, take around 40% less time to carry out.
