

NETAPP STORAGEGRID DEPLOYMENT AND IMPLEMENTATION SERVICES

Achieve faster time to production, reduce costs, and get predictable performance with streamlined deployment and implementation.

The NetApp® StorageGRID® solution enables you to easily manage your unstructured data across public, private, and hybrid multicloud environments. However, installing and integrating this technology into a new or existing environment can be risky if you don't have the time or the skilled resources to do it right.

Deploying your NetApp StorageGRID solution requires expertise in networking, object storage, and cloud technologies. Network complexities, the extensive configurability requirements of a StorageGRID solution, and limited in-house knowledge or time to configure the StorageGRID software can slow time to production, reduce system performance, and increase deployment costs for your new object storage solution.

Streamline StorageGRID deployment and implementation—on premises, on a VM, or on bare metal

Achieve faster time to production, reduce costs, and maintain predictable performance by streamlining deployment and implementation of your StorageGRID solution. With NetApp StorageGRID Deployment and Implementation Services, NetApp object storage experts handle everything for you.

By using a proven delivery methodology, they deploy, design, implement, test, validate, and integrate your StorageGRID solution to provide maximum performance and efficiency. Your new solution is up and running quickly, with no extra burden on your already overstretched IT resources.

Speed time to production and solution value

Network complexities and the extensive configurability requirements for a StorageGRID solution can slow your time to production. NetApp Professional Services experts streamline the coordination of multiple activities among the various parties involved. They coordinate with multiple IT teams across different sites, cloud service providers, your sales team, and your IT team to enable a smooth, timely deployment. By relying on NetApp expertise, you can speed time to market, accelerate time to ROI, and free your IT staff to focus on other strategic projects.

Reduce deployment and implementation costs and risks

You can count on NetApp to deliver a streamlined engagement so that you realize all the benefits of your StorageGRID solution right from the start. Our services experts use a validated process and best practices to quickly and successfully install, configure, and integrate your solution. To help streamline support and to reduce risk for future deployments, as-built documentation provides a concise plan for your StorageGRID implementation.

Customize or expand to meet changing needs

Build a new StorageGRID solution or build upon your current StorageGRID solution with expert assistance integrating it with your existing applications and infrastructure. You make the most of your StorageGRID investment by keeping it operating at peak performance while enabling it to support your ever-evolving business requirements.

Get the right level of service for your business needs

Depending on the complexity of the IT environment and the skill level of internal IT staff, businesses require different levels of deployment support. We offer a choice of service options to align with your resource and business requirements. You can choose either one of the services or engage both services so that you have all the support that you need to enable your StorageGRID solution to start providing business value from day one:

- **Deployment Service**—provides the physical installation of network, power, and StorageGRID equipment. After these components have been installed, NetApp experts verify that they function and that they are ready for further configuration.
- **Implementation Service**—handles everything for you, including solution design, configuration, integration, and testing.
- **Engagement of both services**—delivers end-to-end deployment and implementation capabilities and confirms that you have all the support that you need.

KEY BENEFITS

Speed time to production and solution value

- Rely on experts who can quickly integrate your StorageGRID solution with new or existing applications and infrastructure.

Reduce deployment and implementation costs and risks

- Get it right from the start with a proven delivery methodology that provides predictable outcomes and performance.

Customize or expand to meet changing needs

- Keep your current StorageGRID solution operating at peak performance with the expertise and assistance to build upon it and to integrate new or existing applications and infrastructure.

Get the right level of service for your business needs

- Choose the service options that best meet your resource and business requirements.

Related NetApp Services

- **Managed Upgrade Service.** Reduce security risks in your environment by having the latest NetApp software versions that include all software features, security patches, and firmware upgrades. Highly skilled NetApp experts perform the upgrades.
- **Data Protection and Security Assessment.** Proactively identify gaps in your security protection and be ready to respond quickly if a cyberattack occurs.
- **Ransomware Protection and Recovery Service.** Plan, deploy, and manage a ransomware-ready hybrid cloud data infrastructure that is secure, available, reliable, and recoverable.

About NetApp Services

Gain greater business value from your investment. Whether you're planning your next-generation data center, need specialized know-how for a major storage deployment, or want to optimize the operational efficiency of your existing infrastructure, NetApp Services can help.

About NetApp

NetApp is the intelligent data infrastructure company, combining unified data storage, integrated data services, and CloudOps solutions to turn a world of disruption into opportunity for every customer. NetApp creates silo-free infrastructure, harnessing observability and AI to enable the industry's best data management. As the only enterprise-grade storage service natively embedded in the world's biggest clouds, our data storage delivers seamless flexibility. In addition, our data services create a data advantage through superior cyber resilience, governance, and application agility. Our CloudOps solutions provide continuous optimization of performance and efficiency through observability and AI. No matter the data type, workload, or environment, with NetApp you can transform your data infrastructure to realize your business possibilities. www.netapp.com
