NetApp

NETAPP SOLUTIONS
FOR THE INTELLIGENCE COMMUNITY

Unlock mission value with an intelligent data infrastructure that reaches new levels of operational efficiency and flexibility, and empowers your data-centric workforce to swiftly adapt to changing realities.

Data is the lifeblood of modern intelligence operations
The Intelligence Community (IC) faces unprecedented challenges as it deals with massive amounts of information collected from various sources. Legacy systems and integration issues create data silos that inhibit the adoption of modern technologies and disrupt the flow of information from collection and acquisition, analysis, and the dissemination of foreign intelligence. This can hinder decision making and timely responses to complex and evolving threats.

The IC and its customers, from the president to the warfighter, needs modern data management solutions that improve data security, make information easier to analyze, seamlessly integrates with new and existing technologies, and scales massively to keep pace with rigorous mission demands—all while performing in a manner consistent with our nation's laws and values.

Any data, any place
An intelligent data infrastructure powered by NetApp breaks down data silos, improves security, and removes barriers. You are free to store any data and power any workload simply and seamlessly across any environment—all managed from one intuitive console. You can create a silo-free infrastructure that harnesses observability and Artificial Intelligence (AI) to maximize the value of data everywhere while optimizing for cost, risk, efficiency, and sustainability.

Modernize data storage
With NetApp, you get an intelligent data infrastructure that is built on the broadest portfolio of unified data storage available anywhere. From hybrid flash, all-flash FAS, and all-flash SAN arrays to power your mission-critical applications to software-defined object storage, NetApp® unified storage solutions deliver the right performance for the right price. Learn more.

NetApp ONTAP® data management software unifies management of any data type, any workload, and any application, anywhere. NetApp BlueXP™ delivers operational simplicity through unified management and integrations, intelligent insights, and automation—all with the integrated data protection you need to keep your critical data secure. Learn more.

Enable NetApp Zero Trust and boost cyber resilience
NetApp is the safest place to store your data across on-prem and cloud environments. As the first storage provider to have Commercial Solutions for Classified (CSfC) validation by the U.S. National Security Agency, our solutions are proven to meet the rigorous standards for protecting classified data. See our complete list of recent certifications in the NetApp Trust Center Library.

NetApp data management solutions can contribute to data security, making sure that sensitive information is stored and accessed securely. Our Zero-Trust capabilities protect data and infrastructure from the inside out. Support for a full spectrum of 3-2-1 backup variations, including replication and simple, low-cost disaster recovery protection, keep your data safe from corruption, loss, or accidental deletion. Real-time, AI-powered ransomware protection services and proactive response capabilities take resiliency to the next level. Learn more.

Support AI and analytics
Remove AI infrastructure silos from edge to core to cloud to enable more efficient data collection, accelerate AI workloads, and seamlessly integrate with the cloud—without sacrificing security or governance at scale. Preconfigured solutions and reference architectures that are built in partnership with NVIDIA and other premier AI partners make it easy to deploy and manage so that your data experts can focus on the modeling, not on infrastructure. Learn more.

Optimize cloud infrastructure
Improve your return on cloud investments and streamline the management and scaling of your cloud infrastructure with continuous optimization across compute and storage. Reduce risk and speed cloud migration with cloud-native solutions that comply with the Federal Risk and Authorization Management Program (FedRAMP), AWS GovCloud, and Microsoft Azure DoD Impact Level 4 (IL4) and IL5.

HIGHLIGHTS

- Mission partner to the IC and DoD for more than 30 years

- First storage provider to have Commercial Solutions for Classified (CSfC)-validated systems

- Fully cleared presales, professional services, and support services with 7/24/365 U.S.-based support centers

- Largest data management provider to the U.S. federal government

- More than an exabyte of data deployed on NetApp across the IC and DoD

- Integration with the world's largest clouds, including AWS, Azure, and Google Cloud

- Google Cloud Technology Partner of the Year for Infrastructure – Storage Google Cloud NetApp Volumes, 2024

NetApp BlueXP provides unified control of your cloud storage and data services and on-premises primary storage, making it easy to extend to the cloud as needed. Optimize your primary storage by tiering cold data to object storage on-premises or in the cloud. And you can move data and workloads easily and securely across your on-premises and cloud environments. Learn more.

NetApp in practice

- A large IC organization utilizes a multi-petabyte, microservices architecture, powered by NetApp, to provide numerous IC and DoD mission elements with a fully automated global data mesh to deliver CDN-like capabilities with cloud-like flexibility at the edge.

- A large defense contractor adopts NetApp's industry leading, software-defined object storage technology and our robust partner ecosystem to provide a secure, reliable, and massively scalable data protection solution capable of meeting the most stringent recovery and data spillage Service Level Agreements (SLAs).
