

NETAPP AUTOMATION DESIGN AND IMPLEMENTATION SERVICE

Modernize your storage infrastructure workflow automation with the right design expertise.

Automation isn't automatic

Workflow automation is crucial to bring modern efficiencies to your storage infrastructure. But transitioning to new automation tools can be challenging.

You need the right expertise to design an automated workflow strategy and to implement processes that adhere to best practices. Otherwise, you could put your business at risk, causing disruption and hindering your ability to meet modernization goals. But don't worry, NetApp® Professional Services has you covered.

Streamline workflow automation design and implementation

With the NetApp Automation Design and Implementation Service, NetApp automation experts use a discovery process to gain insight into your current OnCommand® Workflow Automation (OnCommand WFA) usage and to establish your future business needs. They assess your existing automation tools and determine new tool requirements to help guide your workflow modernization and to simplify your storage infrastructure management.

Design phase

In the design phase of the service, our experts set up advanced, cross-functional team sessions to help your organization gain better understanding and buy-in for how automation can be synergized across the company. Our experts then create a workflow automation design to transition your existing workflow automation investment to new industry-standard automation tools without disrupting your business. At that point, you can choose to implement the design on your own, or you can opt to save time and resources by having NetApp Professional Services implement it for you.

Implementation phase

During the implementation phase of the service, our experts guide you through the integration of your new automation workflow design. Their guidance helps reduce the time and the resources that are required to integrate the new design into your existing IT orchestration processes. The experts also perform rigorous testing and validation to confirm that the right tools and processes are being used and that data management best practices are being maintained.

When it's time to automate more workflows to address your ongoing business changes, NetApp also offers a follow-up design service.

About NetApp Services

Gain greater business value from your investment. Whether you're planning your next-generation data center, need specialized know-how for a major storage deployment, or want to optimize the operational efficiency of your existing infrastructure, NetApp Services can help.

Get started today
