

HIT THE ACCELERATOR FOR YOUR MISSION-CRITICAL DATABASES

For success in today's financial services industry, you need constant innovation to create operational efficiencies, to deliver insights for better decision making, and to bring new products and services to market faster.

68%

of financial services executives say that innovation is key to beating the competition.

3%

of organizations are innovation-ready.

37%

of financial services organizations use technology for innovating new products.

Slow and steady doesn't always win the race

Development cycles that take up to 18 months for innovation simply aren't good enough to stay ahead in today's financial services market. To win, you've got to go fast. That means getting more projects done faster and accelerating time to market for new products and services. To do it better than your competitors, you need a solution that will stimulate innovation instead of stifling it.

Success is:

- 30%** Faster project delivery
- 60x** Quicker database backup
- 90%** Savings in time and effort

WHY NETAPP?

Whether your database environment is on premises, in the cloud, or in a customized hybrid setup, we've got the data services and solutions you need to deliver projects faster, speed and simplify database consolidation, and keep your customers happy.

Accelerate time to market

Shorten development cycles and enable faster deployment of your projects. Provision DevTest systems in minutes rather than days. Clone the largest volumes in just seconds instead of hours or days—without a lot of additional storage space.

Keep the data pipeline flowing

Scale up or out smoothly. Cut application response times in half with NetApp® ASA all-flash systems that deliver 1 million IOPS and latency of about 100 microseconds. And get 99.9999% availability so that your data is available when and where you need it.

Make better-informed decisions

Access data across your entire IT infrastructure, including cloud environments. Seamless integration with AWS, Azure, and Google Cloud enables you to easily access your data and simplify management of your databases no matter where they reside.

Protect data wherever it lives

Integrated, automated data protection safeguards data across edge, core, and cloud resources. Instant NetApp Snapshot™ copies make sure your backups don't miss a beat.

Meet compliance requirements

Native encryption of data at rest and in transit combined with auditability and traceability of database access help achieve General Data Protection Regulation (GDPR), Digital Operational Resilience Act (DORA), and ISO 27001 compliance.

“With NetApp solutions, we’ve seen extraordinary growth while maintaining our core promise of stable, secure banking IT for our customers.”

–*Oliver Fuckner*
Systems Engineer, Open Systems & Backup, Atruvia AG

About NetApp

NetApp is the intelligent data infrastructure company combining unified data storage, integrated data services, and CloudOps solutions to turn a world of disruption into opportunity for every customer. NetApp creates silo-free infrastructure, then harnesses observability and AI, to enable the best data management. As the only enterprise-grade storage service natively embedded in the world's biggest clouds, our data storage delivers seamless flexibility and our data services create a data advantage through superior cyber-resilience, governance, and applications agility. Our CloudOps solutions provide continuous optimization of performance and efficiency through observability and AI. No matter the data type, workload or environment, transform your data infrastructure to realize your business possibilities with NetApp. www.netapp.com
