PROTECT, DETECT, AND DEFEND
YOUR DATA WITH NETAPP

CYBERCRIME IS ON THE LOOSE

We're living in the era of data. Data—the crown jewel of businesses around the globe—sprawls across hybrid multicloud environments. That sprawl takes away your control over your data, and it's also a culprit in the growth of data breaches. With attackers using sophisticated AI technologies, protecting your data becomes more challenging than ever.

29%
Only 29% of security leaders say that they are very prepared for ransomware incidents.

66%
Two out of three organizations report moderate-to-critical skills gaps to meet their security requirements.

30%↑
U.S. organizations faced an average of 1,636 cyberattacks weekly in Q2 2024, a 30% increase over the previous year.

STRENGTHEN YOUR SECURITY POSTURE

Keeping today's data safe requires more than just backup. Most storage vendors say that they help customers build cyber resilience, but what they really deliver are backup solutions that build business continuity. NetApp offers those capabilities as well, but our cyber-resilience solutions go beyond backup to cover everything from built-in real-time detection and response for primary storage, storage hardening to immutable backups, disaster recovery, and data governance.

To make it easy for hybrid cloud environments, we built a software-as-a-service (SaaS) platform to deliver comprehensive cybersecurity capabilities with an extensive partner ecosystem for any workload, stored anywhere.

PROTECT YOUR DATA WITH CONFIDENCE

With the most secure storage on the planet, NetApp helps you minimize risk, enhance business continuity, reduce recovery costs, and maintain compliance for any workload, anywhere. NetApp offers the only enterprise storage validated by NSA CSfC to store top-secret data. Our solutions are secure by design, with built-in ransomware protection, backup, disaster recovery, and integrated data governance—delivering cyber resilience for any workload, stored anywhere.

	Secure by design			
CYBER RESILIENCE	**Ransomware protection**	**Backup**	**Disaster recovery**	**Integrated data governance**
	Real-time ransomware detection	Full spectrum 3-2-1 backup and recovery for NetApp® ONTAP®	Simple cloud control plane for DR for VMware workloads	AI-powered data intelligence to simplify governance and improve decision making
	Fast, orchestrated workload protection and recovery	Efficient application- and VM-consistent backup and recovery	High performance and reliable data replication with nondisruptive DR tests	Hybrid multicloud support eliminates silos to unlock the potential of your data
	Locked-down snapshots with cyber vault	Supporting heterogeneous customer environments	Low-cost DR-as-a-service	Automated compliance to protect the business

FOR ANY WORKLOAD	**vmware**	**ORACLE**	**SAP**	**Microsoft SQL Server**	**kubernetes**

STORED ANYWHERE	**∎ NetApp**	**aws**	**Google Cloud**	**Microsoft Azure**

A PARTNER YOU CAN TRUST

Strengthen your security posture with the planet's most trusted storage. We safeguard your operations, accelerate recovery, cut disaster-related expenses, and simplify compliance, delivering resilience that drives business success. Our comprehensive set of security capabilities protects your data at the core, helping you to combat threats and recover seamlessly.

READY TO GET STARTED? THERE'S A SERVICE FOR THAT!

NetApp not only offers comprehensive cyber-resilience capabilities, we also offer services to help you get started. Need help understanding your current security posture? There's a service for that! Need help configuring NetApp Workload Security? There's a service for that! Need help setting up our SaaS platform? There's a service for that—and more!
