

Your best options for addressing data growth

Add capacity now to avoid performance bottlenecks that can affect business.

¹ Additional Capacity

Add storage shelves to your existing AFF or FAS system

² Additional Controller

Add a controller to the cluster for increased performance and capacity, and to enable load balancing

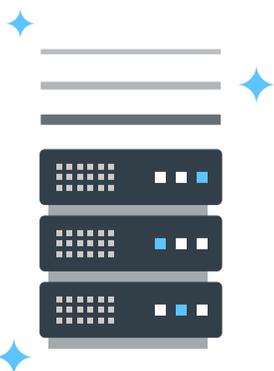

³ Tier cold data to an object storage tier to free up space on your high-performance AFF system

Leverage NetApp® StorageGRID® for on-premises object storage
Leverage the public cloud for off-premises object storage

⁴ Tech Refresh

Replace your older NetApp technology with the latest infrastructure

If your system is more than 3 years old but you aren't ready to refresh, you can add storage shelves, add a controller to your cluster, or choose a tiering solution.

NetApp recommends updating to the latest release of ONTAP® software, which can unlock up to 33% additional storage efficiency.

For more information, reach out to your key NetApp contact or NetApp partner.
