NetApp Removes Hurdles to Cloud Adoption

74%

of the applications still residing in organization's on-premises data centers, on average, are considered to be candidates for transitioning to the cloud.

Migration of mission-critical applications is the main challenge to cloud adoption. These tier-one file workloads require enterprise-scale storage to handle the high availability and performance demands. Cloud Volumes ONTAP for AWS minimizes migration complexities with the same file system experience onsite and offsite making nearly every application a viable candidate for the cloud.
