

SysAdminOK triples its data storage capacity with NetApp solutions

Increasing storage capacity to ensure customer activity and data availability

SysAdminOK was founded in early 2012 with a clear objective: to offer professional Cloud solutions for web projects where the exigency, availability, performance and security are critical factors for the business.

One of the company's strengths is the 24/7/365 monitoring system for its clients' web applications, which allows them to anticipate any unforeseen events that may arise.

SysAdminOK has clients that are leaders in their sectors of activity, such as the textile, food and health sectors. 70% of its clients have powerful eCommerce platforms or online environments in which they market their products.

**Storage capacity
increased
by 350%
with NetApp
solutions**

“NetApp offers us the highest security with features such as multi-factor verification, built-in encryption, data replication, and more.”

Alvaro Diezma
Key Account Manager at SysAdminOK

NetApp as a partner for growth

The development and consolidation of the e-commerce sector, as well as the company’s own growth, have led SysAdminOK to rely once again on NetApp for the reliability and robustness of its technology.

The company’s workloads have increased and its customers’ business applications are becoming more and more demanding in terms of security, speed and service availability. In response, SysAdminOK has chosen NetApp® AFF A700s all-flash storage system solutions for their power and high performance, and to ensure the security and availability of its customers’ data.

NetApp’s peace of mind and industry-leading warranties were other key factors in the company’s choice.

Highlights of the AFF A700s

The storage arrays chosen by SysAdminOK have enabled the company to significantly improve the performance and maximum capacity of its environment, increasing its storage power by 350%.

In addition, this solution meets the company’s security and availability standards, which are an essential part of its work. The benefits of the solution are illustrated by an example the company uses to show its customers how the NetApp solution protects their data. “If a customer uses non-replicating SSD storage, the moment a disk or RAID controller fails, their data can be lost or corrupted. In our case, by using these NetApp storage solutions, the data would always be secure. There is no fear that a failure of any of the disks, trays or controllers could result in a loss of data or loss of service.

A clean and easy migration

In addition to the features of the solution, the migration

of the Data Center without stoppages or incidents and the expansion of the storage solution from the A200 and A220 solutions to the A700 are worth mentioning. In this way, the cabinets used by SysAdminOK range from the A200 and A220 to the A700.

Thanks to the support of NetApp’s technical services, the migration was completed in less than 24 hours and none of SysAdminOK’s customers reported any changes or incidents in the development of their online activity. During the migration, the customers’ web applications continued to operate at full capacity.

Cybersecurity: a must-have right now

Cybersecurity is one of the main concerns of customers who decide to contract a hosting service. SysAdminOK has responded to this market need by developing a parallel cybersecurity line that includes its own Web Application Firewall (WAF) and Security Operations Center (SOC) solutions that guarantee business protection for its customers through near-instant threat detection.

The NetApp solution is perfectly aligned with the company’s cybersecurity objectives and security standards, thanks to features such as multifactor authentication, built-in encryption and data replication.
