# SYNLAB strengthens its storage environment to meet growing demand

n NetApp

SYNLAB upgrades and improves its storage environment with all-flash technology.

The SYNLAB Group is the undisputed leader in human medicine laboratory services for the European market, with operations in 40 countries on 4 continents and more than 22,000 employees. SYNLAB delivers about 500 million medical test results every year. NetApp® hybrid storage solutions implemented in data centers in Madrid, Barcelona, and Portugal are key to improving response times in the face of enormous growth and unprecedented demand.

"The high performance of all-flash storage has allowed us to respond to unprecedented demand throughout the pandemic,"

Juan Carlos Marín Silva
CIO Iberia at SYNLAB

The SYNLAB Group, Europe's number-one clinical laboratory services provider, has had to cope with a considerable increase in demand over the past year. Thanks to NetApp's range of all-flash solutions, SYNLAB has been able to respond effectively.

As Juan Carlos Marín Silva, CIO Iberia at SYNLAB, explains,

"Our infrastructure needs to be constantly improving to support increasingly demanding healthcare activity in terms of results delivery times, as well as information accessibility and availability for patients."

With this objective in mind, the company partnered with IEAISA, which also supports SYNLAB's own NetApp® storage environment, to implement all-flash storage.

All-flash storage was chosen for the company's data centers in Madrid, Barcelona, and Portugal because of its high performance, which can accommodate a large amount of critical data processing and analysis, SYNLAB's new all-flash solution also includes tools that make it possible to protect data by taking advantage of native functionalities and intelligence.

The company's storage environment is now much more capable thanks to the improved performance, scalability, and technical service that NetApp provides. In addition, the new solution makes it possible to guard against service disasters and loss of information, supporting business continuity and compliance with data protection regulations such as GDPR. These features are essential for a company like SYNLAB because of the volume and nature of the data it handles.

As a result of their positive experience with NetApp all-flash storage, SYNLAB plans to incorporate NetApp technology into their centralized infrastructure, which supports the deployment of SAP for all the group's countries, as well as other mission-critical projects.
