Handle data with military precision

Maximize mission effectiveness with NetApp's data management solutions.

©Bundeswehr/Trotzki

Globally, the security situation and the pandemic have accelerated the uptake of digital technologies in pursuit of new efficiencies. The defense sector is no exception. Military operations and intelligence rely on the secure and timely flow of data—any upgrades that can be made to enable speed, security, and ease of access are hugely valuable and can safeguard lives.

Currently, data within the German Armed Forces is mostly siloed across different domains. As a result, a lack of connectivity is blocking a unified view and slowing decision-making. Breaking down these silos and centralizing your data is crucial to boosting the responsiveness and accuracy of mission-critical decisions.

Discover digital command and control

Data is used at every command level, from operational planning through to logistical support in the field. Despite this, IT and data management skills, tools, and processes are still not wholly embedded. This shortfall, combined with legacy IT systems, makes it difficult to best utilize your data and achieve optimal mission effectiveness. However, by connecting your data across your domains, you can reach and benefit from deeper insights.

How NetApp can help

Our data management solutions are perfectly aligned to boost the German Armed Force's digital capabilities, easing data handling to deepen insights and enable better-informed decisions, alongside promoting overall performance, resilience, and protection.

Data management control

We empower you to manage your data—on your premises and across private and public clouds—with unprecedented flexibility. From our centralized platform, you can view and take control of all your data with a unified perspective, no matter where it lives.

Seamlessly connected data

We're specialists in building data fabrics to deliver data where, when, and how you need it. Your data fabric will break down silos and give you greater visibility, protection, and control over your data. We can help your data to flow seamlessly across all your environments, enabling you to get the most from your data.
