

NetApp Hybrid Cloud Migration Service for VMware

Reduce risk and speed the migration or extension of VMware workloads from on premises to any public cloud.

The challenge

Moving to the cloud is not always a simple lift and shift. Virtualized application environments can be complex. And when transitioning your on-premises VMware workloads to the cloud, VM sprawl, compatibility problems, and compliance and governance issues can often complicate and delay the process. If not done right, your transition can result in excessive costs, diminished workload performance, and slower time to value for your cloud solutions.

The solution

NetApp® Hybrid Cloud Migration Service for VMware quickly and securely migrates or extends your VMware workloads and underlying datastores from on premises to your choice of public cloud provider platforms (AWS, Azure, or Google Cloud). It shortens your cloud migration timeline by easily moving complex application environments so that you can get the most value from your VMware integrated cloud solution faster. This end-to-end service covers every phase of the migration process—from discovery and design to architecting, implementation, migration, testing and validation, and knowledge transfer.

Enable a smooth migration

Getting your VMware workloads to the cloud can be complicated and time-consuming. With NetApp Hybrid Cloud Migration Service for VMware, you can quickly, easily, and seamlessly transition your VMware workloads to the cloud. NetApp Professional Services experts use NetApp Cloud Insights to assess your VM compute and storage requirements and then create a migration strategy that's specific to your needs. By using the right tools and platforms, our experts perform the actual migration. They then work with you to test and to validate the environment to confirm that it is fully functioning.

Reduce complexity, risk, and time

NetApp Professional Services cloud experts know how to take the risk out of moving your VMware workloads to the cloud. They use your actual production workload data to design and to architect the rightsized cloud environment to meet your IT requirements and business goals. A detailed migration plan and timeline help your migration to be completed on time and on budget. You also gain access to NetApp ONTAP® features for security, backup, and data recovery to protect your data and to meet compliance requirements.
