Cloud: the miracle cure?

Improve access to GSK's data worldwide by moving to the cloud with NetApp.

The speed at which drug development and clinical trial data are generated is off the charts, but legacy systems are slowing access to this data. This presents a significant technical obstacle to GSK's digital transformation.

At GSK, you need the ability to manage, scale, share, and exchange data securely and in a governed manner to quickly extract actionable clinical trial insights, speeding up the R&D process and reducing time to market.

Treating cloud issues

Recent cloud service developments have provided GSK a solid understanding of the cloud. But it's understandable that you're facing challenges when analyzing workloads and applications during the cloud migration journey.

Working with an experienced cloud partner such as NetApp will help GSK design, plan, and implement a cloud strategy that caters to R&D needs, unlocks more value from your data, and takes full advantage of the cloud.

How NetApp can help

Only NetApp provides the leading innovations and technical know-how to power patient-centric, data-driven insights for GSK. Our 25 years in data management also means you can be confident that your data is protected, and access is compliant.

Trust the hybrid cloud experts

Leverage hybrid cloud solutions from NetApp for total compatibility and interoperability between GSK's on-premises footprint and all major public clouds. This means one integrated experience that lets workloads move seamlessly to the cloud, reducing operational complexity and any risks you may face with migration.

Gain end-to-end visibility

Benefit from full-stack visibility, which will help GSK with resource monitoring, troubleshooting, and optimization. It also lets you track rising spend by pinpointing unused infrastructure and overprovisioned workloads so you can control costs, ensure availability, and protect data.

Detect and prevent threats

Spot suspicious data activity, detect potential ransomware attacks, and stop them in real time. Use our simple, efficient, and secure backup and restore capabilities for the protection and long-term archive of GSK's data, ensuring business continuity and minimizing any potential losses of R&D data.
