

DATASHEET

NetApp HCI

Enterprise-scale hybrid
cloud infrastructure

Accelerate new services

Public cloud providers offer a simple, fast, and efficient model to consume required IT services and help optimize budgets. However, organizations still need the other half of the hybrid model: creating, securing, and deploying services for on-premises environments based on business, compliance, and operational requirements. These requirements are leading IT organizations to demand equivalent cloud-native IT services for on-premises data centers. Public clouds automate management and lifecycle, and they simplify how users consume IT. Although hyperconverged infrastructures originally sufficed, their design neglects the ability to span and scale a choice of resources across the data center and multiple public clouds. NetApp HCI delivers an elastic hybrid cloud infrastructure that enables customers to start anywhere, run anywhere, and manage everywhere.

Streamline infrastructure and maximize your clouds

NetApp HCI is designed to deliver a public cloud consumption experience with simplicity, dynamic scale, and operational efficiency to hybrid multiclouds. NetApp HCI is built to seamlessly orchestrate containers on the premises. Infrastructure and cloud architects can easily access industry-leading services from any third-party cloud provider, run them on their premises, and mix and match these services to optimize resources for specific workloads and applications.

Empower your organization to move faster while reducing costs with NetApp HCI. Easily manage and run multiple applications with the predictable performance that your enterprise and customers demand. Scale compute and storage resources independently so you never pay for more than you use. And deploy in minutes with a turnkey cloud infrastructure that eliminates the complex management of traditional three-tier architectures. Integration into the data fabric delivered by NetApp means that you can unleash the full potential of your applications, with the data services they require, across any cloud.

Key benefits

Reduce consumption costs

- Consolidate multiple workloads and reduce TCO by 59%
- Pay less as you grow more
- Remove or reduce infrastructure capex
- Avoid the hypervisor licensing tax

Flexible

- Hybrid cloud, one infrastructure
- Dynamically scale up and/or down
- Leverage existing investments and redeploy

Simple

- Easy to deploy with NetApp® Hybrid Cloud Control manageability suite
- Common experience across public and private clouds
- Integrated with data fabric powered by NetApp
- 92% less administrative time with nondisruptive scaling and no downtime
- Centralize and streamline management

Break free from the limits of today's hyperconverged infrastructure solutions that are complex, can't consolidate all of your workloads, force you to scale in ways that strand resources, and throttle the performance required by next-generation applications. Realize the true promise of an enterprise-scale hybrid cloud infrastructure solution with NetApp HCI.

Increase operational efficiency and customer satisfaction

One of the biggest challenges in any data center is to deliver predictable results, especially in the face of proliferating applications and workloads. Any time that multiple applications share the same infrastructure, the potential exists for one application to interfere with the performance of another. NetApp HCI solves predictability challenges with unique performance guarantees that provide granular control of every application, eliminating resource contention, delivering 3 times the storage performance, and increasing compute efficiency by 22%.

One of the most effective ways for enterprise customers to take advantage of the NetApp HCI performance guarantees is by consolidating all of their applications, including ones that previously required separate silos. In NetApp HCI, each volume is configured with minimum, maximum, and burst IOPS values. The minimum IOPS setting guarantees performance, independent of what other applications on the system are doing. The maximum and burst values control allocation, enabling the system to deliver consistent performance to all workloads.

Dynamically scale on demand to lower TCO

Data centers don't scale linearly because business needs are constantly changing, and each application requires different things from the infrastructure. The NetApp HCI node-based shared-nothing architecture delivers independent scaling of compute and storage resources. This approach enables you to dynamically scale up or down on demand, avoiding costly and inefficient overprovisioning and simplifying capacity and performance planning. Start as small as two nodes and add exactly what you require to scale your infrastructure in a granular fashion over time to reduce TCO. Third-party analysis shows that NetApp HCI is the lowest-cost all-flash HCI on the market today, reducing TCO by as much as 59%. By decoupling market-leading software from the underlying hardware under the term-capacity model, NetApp offers a modern purchasing model that aligns with how storage is bought and consumed today. This model balances the flexibility of software-defined storage with the convenience of purpose-built appliances.

Most companies don't want to throw away their existing data center investments when purchasing new equipment. NetApp HCI has an open and flexible architecture that lets you use your existing virtualization infrastructure, licenses, and external compute to lower initial acquisition costs and repurpose existing operations.

Simplify and automate to empower your business

NetApp HCI streamlines installation through an intuitive deployment engine that has automated more than 400 inputs to fewer than 30 to get you running

in about 45 minutes. In addition, a robust suite of APIs enables seamless integration into higher-level management, orchestration, backup, and disaster recovery tools. And with the NetApp Hybrid Cloud Control management suite, you can manage, monitor, and upgrade your entire infrastructure throughout its lifecycle through a single pane of glass.

Deploy and use Rancher, open source software that can be used without a fee, with the click of a button in the NetApp HCI Hybrid Cloud Control (HCC) management plane. If and when you need it Rancher enterprise support is available with simplified, core-based pricing.

In addition, NetApp HCI offers a choice of centralized management through VMware, Red Hat, and OpenStack to give you control through tools you already use, so that you can focus your resources on higher priorities that drive business growth. NetApp HCI delivers a true hybrid multicloud experience.

Unleash the power of your data to achieve a new competitive advantage

Leading businesses across every industry are building data fabrics to strategically address today's complex IT challenges: modernizing and simplifying IT to accelerate business-critical applications, building private clouds to gain speed and agility, and fueling data-driven innovation on their choice of clouds. Organizations that are doing any of these things with NetApp are on their way to building their unique data fabric. The data fabric is NetApp's strategy for simplifying and integrating the orchestration of data services for enterprise and cloud-native applications in any combination across hybrid multicloud environments. The data fabric enables companies to respond and innovate more quickly because their data is accessible from both on-premises and public cloud environments. Integration with the data fabric allows NetApp HCI to provide data services, including file services, through NetApp ONTAP® Select, object services through NetApp StorageGRID®, replication services through NetApp SnapMirror®, data visibility through NetApp OnCommand® Insight, and backup and recovery services through NetApp Cloud Backup.

1. NetApp HCI H610C/H615C with GPU requires NVIDIA Software License.
2. Cables and transceivers not included.
3. NetApp HCI effective capacity calculation accounts for NetApp Element software, NetApp SolidFire Helix® data protection, system overhead, and global efficiency,
4. including compression, deduplication, and thin provisioning. Element software customers typically achieve an effective capacity range of 5 to 10 times the (usable) capacity, depending on application workloads.
5. NetApp HCI supports the FIPS 140-2 level 1 standard. Third-party validation is in progress.

Mellanox H-Series switches

SN2010	Half-width open Ethernet switch with Mellanox Onyx. 18 SFP28 (10/25GbE) and 4 QSFP (40/100GbE) ports delivering up to 1.7TB/s aggregate throughput. QSFP ports support 4x25GbE breakout cables. Switch sold with all ports licensed.
SN2100	Half-width open Ethernet switch with Mellanox Onyx. 16 QSFP (40/100GbE) ports delivering up to 3.2TB/s aggregate throughput. QSFP ports support 4x25GbE breakout cables. Switch sold with all ports licensed.
SN2700	Full-width open Ethernet switch with Mellanox Onyx. 32 QSFP (40/100GbE) ports delivering up to 6.4TB/s aggregate throughput. QSFP ports support 4x25GbE breakout cables. Switch sold with all ports licensed.
Features	Mellanox Neo management application, monitoring, and telemetry, network virtualization, layer 2 and layer 3 support, management, and automation.
Security	UC APL, FIPS 140-2, Storm Control (ACLs L2-L4 and user defined), 802.1X – Port-Based Network Access Control, SSH server strict mode – NIST 800-181A, CoPP (IP filter), port isolation.

NetApp HCI: multicloud enterprise scale

NetApp HCI is composed of industry-leading technologies that are integrated to deliver a hybrid cloud infrastructure that addresses enterprise-class multicloud agility, scale, and services. It brings together Intel core processing for system-critical applications, networking for hyperconverged infrastructures, and the industry's highest user density for virtualized desktops and applications from NVIDIA's GPUs. All parts of the infrastructure are fully architected and managed as a single appliance, through a single pane of glass.

- NetApp's innovative three-dimensional quality of service offers predictable performance across all of your applications.
- Independent compute and storage resources allow you to scale flexibly when and how you need to.
- Simplified deployment and ongoing management give your IT department an automated infrastructure from day 0 to day 1,500 and beyond.
- You have freedom of choice. Whether you use VMware or Red Hat private cloud stack, or connect containerized workloads to your public cloud vendor, NetApp HCI delivers an agile foundation for your private and hybrid cloud infrastructure.

As your business adopts a hybrid multicloud approach, you'll need to create your own perfect world, with some data stored in the public cloud and other data stored on your premises. NetApp HCI is architected to deliver cloud-native capabilities that extend from the data center into the public cloud vendor. Leverage the full potential of your data, whether on your premises or in the public cloud, through integration with your data fabric.

Start your transformation today

Our data experts are available to help you plan and implement your seamless transition to NetApp HCI and gain advantages from day 1. You can use NetApp Services or NetApp Services Certified Partners; you can do it yourself by using our proven tools and processes; or you can combine these approaches.

NetApp HCI is backed by world-class support for both hardware and software.* Support includes 24/7/365 worldwide availability, with 4-hour on-site response for critical system issues.

For more information, visit www.netapp.com.

About NetApp

In a world full of generalists, NetApp is a specialist. We're focused on one thing, helping your business get the most out of your data. NetApp brings the enterprise-grade data services you rely on into the cloud, and the simple flexibility of cloud into the data center. Our industry-leading solutions work across diverse customer environments and the world's biggest public clouds.

As a cloud-led, data-centric software company, only NetApp can help build your unique data fabric, simplify and connect your cloud, and securely deliver the right data, services and applications to the right people—anytime, anywhere.

* Rancher enterprise support is purchased separately
