

NetApp for Office 365 Data Protection

10 GOOD REASONS

SAAS GROWTH

"By 2025, 55 percent of large enterprises will successfully implement an all-in cloud SaaS strategy." Gartner

01

02

DATA LOSS

Data loss is more common than ever, even small incidents can impact day-to-day business and profitability.

NO GUARANTEES

Microsoft Office 365 guarantees the availability of your data, but not the protection of it.

03

04

ACCIDENTAL DELETION

SaaS providers offer DR against data center outages, but do not guarantee against accidental deletion, virus or malware, hackers, or ransomware attacks.

WHO'S RESPONSIBLE?

Every SaaS provider explicitly calls out that clients are responsible for protecting their own data.

05

YOU!

DELETE

06

RECOVERY MATTERS

Office 365's native recycle bins and version histories are not true backups. They don't allow internal IT organizations to control backup and recovery.

ARCHIVING

If a hold isn't placed on a mailbox before it's deleted, the mailbox contents will not be preserved or discoverable after 30 days.

07

08

EMAIL RESTORATION

Without a third-party service, point-in-time restoration for your Exchange server is not in scope. In case of a ransomware attack, or accidental deletion, you would not be able to roll back your inbox.

SECURITY & COMPLIANCE

It's key that your data is compliant - encrypted and ideally backed up at a secondary location to the SaaS provider's data center.

09

10

THE SOLUTION

NetApp Cloud Control for O365 is an agentless, all-in-one cloud-based service with nothing to download or install.

As the adoption of SaaS offerings continue unabated and production data moves to the cloud, Microsoft Office 365 is the foundation of many organization's business-critical operations on a day-to-day basis. The ramifications of compromised Microsoft Office 365 data range from inconvenient to disastrous.
