

# NetApp and Equinix for Google Cloud

NetApp and Equinix have teamed up to deliver the ultimate data center transformation. Now you can take advantage of Google Cloud's big data, AI, analytics and storage capabilities – as soon as you need them – no matter if your applications are on-prem, or on another cloud such as Azure or AWS.

## What are your challenges?

### Multi-cloud strategy

You may be running a front-end application in another cloud or on-prem but that shouldn't mean missing out on Google Cloud's advanced compute capabilities. Equinix and NetApp can help you access Google Cloud functionality across your multi-cloud network.

### Migration

Similarly, you may want to migrate data from another cloud to Google Cloud but find yourself experiencing delays and latency issues with VPN or other interconnections partners. Equinix can help you connect to Google Cloud in minutes not months, and move TBs of data at 10GB+ speeds, without packet drops.

### Modernization

If you're struggling with infrastructure modernization, legacy applications and poor end user experience, NetApp and Equinix can help re-architecture your network and storage infrastructure for efficiency and a better user experience.

## How NetApp and Equinix can help

Wherever you're located, it's never been easier to get your data center into Google Cloud. Thanks to Equinix's 220+ data centers worldwide and dedicated interconnections to Google Cloud in over 30 metros, we can support on-prem deployment in regions where Google Cloud isn't even present.

When you combine Equinix's interconnections with NetApp's leading file system performance inside Google Cloud, you get a faster, more agile data center experience. Together, we make hybrid multi-cloud a reality.

### Here's how your business can benefit from choosing NetApp and Google Cloud:

Provision Windows file shares or Linux file shares on-demand

Get advanced data management features including storage encryption, snapshots and multi-zone high availability to protect your data and meet compliance needs

Start with 1TB, pay only for what you use and reduce infrastructure costs by up to 70%

### And when you add Equinix, you can also:

Replicate filesystems across clouds and across regions

Improve performance with low latency connections

Reduce packet loss and connection drops

Enhance security with encrypted volumes and encryption in flight

Improve scalability of your applications

Automate your multi-cloud storage needs with Terraform and other tools
