Datasheet

NetApp EF570 All-Flash Array

Make decisions faster, more actionable, and secure

The Challenge
Organizations today are looking for ways to improve the speed and responsiveness of the applications that control their key business operations. Because the performance of these applications is tightly linked to time to market, revenue, and customer satisfaction, it is crucial that they operate at the highest levels with maximum efficiency. Getting value and insights quickly and reliably from a range of mixed workload environments can differentiate your organization from the competition and accelerate time to market.

The Solution
The midrange NetApp® EF570 all-flash array is an all-SSD storage system that can turbocharge access to your data and increase its value. Requiring just 2U of rack space, the EF570 all-flash array combines extreme IOPS, sub-100 microsecond response times, and up to 21GBps of bandwidth with leading, enterprise-proven availability features, including:

- Redundant components with automated failover
- Intuitive storage management with comprehensive tuning functions
- Advanced monitoring and diagnostics with proactive repair
- NVMe over Fabrics support, providing lowest latency and investment protection
- NetApp SANtricity® Snapshot™ technology, volume copy, and remote mirroring for data protection
- SANtricity Cloud Connector, enabling backup to the cloud and data mobility across NetApp systems

Combined, these capabilities offer the best price/performance, configuration flexibility, and simplicity in a compact package to help you make decisions faster, more actionable, and more secure.

Key Benefits

Extreme Performance
- Up to 1M IOPS and 21GBps of sequential bandwidth to help you scale
- Sub-100 microsecond latency to increase application responsiveness
- Support for multiple high-speed host interfaces

Unmatched Value
- Leading price/performance for both IOPS and MBps in the same system, based on industry benchmarks
- Integration with the NetApp® Data Fabric for seamless backup and recovery to the hybrid cloud
- Support for over 367TB of raw flash capacity in a modular 2U building block that scales to 1.8PB

Proven Simplicity
- A modern, on-box, browser-based GUI enables access to data in under 10 minutes
- Full-featured embedded web services REST API for easy integration
- Fourth-generation all-flash system
Extreme Performance
Designed specifically for mixed-workload environments, including big data analytics, technical computing, video surveillance, and backup and recovery, the EF570 all-flash array delivers over 1.0M sustained IOPS and response times in microseconds. Bandwidth-oriented workloads also benefit from the capability of the EF570 to provide up to 21GBps of throughput. The EF570 is also the first 2U array to support a broad range of high-speed host interfaces. To protect your investment in storage networks, the EF570 supports a broad range of high-speed host interfaces, including 32Gb Fibre Channel (FC), 25Gb iSCSI, 100Gb InfiniBand, 12Gb SAS, 100Gb NVMe over InfiniBand, and 100Gb NVMe over RoCE.

The EF570 increases performance for big data analytics applications such as Splunk by up to 2x, enabling you to search and analyze data in half the time. In customer deployments, the EF570 has cut video processing times by as much as 95%, reduced dataset analysis from weeks to hours, and accelerated response times for financial transactions by 4x. The all-flash design is built in a 2U enclosure and delivers the performance of over two thousand 15,000-RPM HDDs while requiring under 2% of the rack space, power, and cooling. With up to 98% reduction in space and power consumption, the EF570 all-flash array helps to significantly improve the overall efficiency of IT operations while continuing to meet performance requirements from business operations.

Unmatched Value
The EF570 all-flash array offers industry-leading price/performance in an enterprise-grade 2U system. With support for up to 367TB of flash capacity in a single modular 2U building block, the ultradense EF570 enables you to easily address ever-changing business requirements. The EF570 provides investment protection to meet future demands without forklift upgrades through the ability to independently scale to 1.8PB of raw flash capacity and 1M IOPS.

Proven Simplicity
The EF570 modular design and simple management tools make it easy to scale without adding management complexity. The modern, on-box, browser-based SANtricity System Manager GUI enables you to simplify deployment and get access to your data in under 10 minutes.

High Availability and Enterprise Reliability
The EF570 all-flash array was engineered from the start to support applications that are the heart of a corporation's business. Built with reliability in mind, the EF570 all-flash array leverages extensive expertise learned from more than 20 years of development experience and more than 1 million implemented systems to provide enterprise reliability in both the architecture and the software design. With fully redundant I/O paths, advanced data protection features, and extensive diagnostic capabilities, the EF570 storage systems enable you to achieve greater than 99.9999% availability and provide data integrity and security.

Designed to have no single point of failure, the EF570 all-flash array has fully redundant I/O paths with automated failover and extensive diagnostic capabilities that alert on and actively help resolve failures. SANtricity data assurance (based on the T10 PI industry standard) ensures data integrity and protects against silent data corruption. Storage administrators can make configuration changes and conduct maintenance without disrupting application I/O.

One of the most critical aspects of an enterprise solution is the ability to detect and resolve issues. In this area, the EF570 all-flash array provides significant depth of capabilities, including:

• Extensive capturing of diagnostic data provides comprehensive fault isolation and simplifies analysis of unanticipated events.
• Intelligent management of SSDs offers wear life reporting and proactive warnings.
• Integrated Recovery Guru diagnoses problems and provides the applicable procedure to use for recovery.
• With NetApp Dynamic Disk Pools (DDP) and RAID 6, a drive rebuild continues even when an unreadable sector or second failure is encountered.
• NetApp Active IQ® provides proactive dispatch and maintenance.
Advanced Data Protection
SANtricity DDP technology allows storage administrators to simplify RAID management, improve data protection, and maintain predictable performance under all conditions. DDP technology evenly distributes data, protection information, and spare capacity across the entire EF570 pool of drives, simplifying setup and maximizing use. This innovative technology minimizes the performance impact of a drive failure and can return the system to optimal condition up to 8x faster than traditional RAID. With shorter rebuild times and patented technology to prioritize reconstruction, DDP significantly reduces exposure to multiple failures, offering a level of data protection that simply can’t be achieved with traditional RAID.

With SANtricity software, all management tasks can be performed while the storage remains online with complete read/write data access. Storage administrators can make configuration changes, conduct maintenance, or expand the storage capacity without disrupting I/O to attached hosts.

SANtricity software online capabilities include:

- Dynamic volume expansion allows administrators to increase the capacity of an existing volume.
- Dynamic segment size migration allows administrators to change the segment size of a given volume.
- Dynamic RAID-level migration changes the RAID level of a RAID group on the existing drives without requiring the relocation of data. Supported RAID levels are 0, 1, 5, 6, and 10.
- All firmware updates (controller, drive, IOM) are nondisruptive, with no interruption to data access.

To protect against data loss and downtime events, both locally and over long distances, the EF570 all-flash array offers advanced data protection that is common to enterprise storage. These features include:

- **Snapshot copies.** Create and restore point-in-time copies of datasets in less than a second to protect against accidental data loss on the local array.
- **Volume copy.** Create a complete physical copy (clone) of a volume for applications that require a full point-in-time copy of production data.
- **Asynchronous mirroring.** Replicate volumes over FC or IP long distance to remote sites to keep your business operations running no matter what happens.
- **Synchronous mirroring.** Continuous volume replication over FC at campus distances.
- **Cloud backup.** SANtricity Cloud Connector enables flexible and cost-effective backup and recovery from on-premises storage to the cloud.

With the EF570 all-flash array, you can easily replicate data to another EF570 or to a NetApp E-Series system. With this capability, you can create a high-speed, low-latency recovery system that runs at the same speed as your production operations. You can also choose to fail over to a consolidated E-Series system with more cost-effective disk storage. This flexible design allows you to choose the profile of performance and cost that your business requires.

“The EF-Series could handle 10 times the number of concurrent users in 95% less processing time, even while playing large video files.”

Bill Kernan, CIO
Western Oregon University

Secure Data, Secure Management
NetApp SANtricity drive encryption combines local key management with drive-level encryption for comprehensive security for data at rest with no impact to performance. Because all drives eventually leave the data center through redeployment, retirement, or service, it’s reassuring to know that your sensitive data isn’t leaving with them. Customers can choose to manage the drive authentication keys natively for a simple lowest-cost solution or use a KMIP-compliant external key manager for centralized administration. Management access to the EF570 is protected with role-based access control and LDAP/Active Directory integration. The security administrator manages user privileges and password requirements. The exportable audit log provides visibility into management actions taken on the array. All management communication is over https.

DevOps Ready
To enable the automation and agility that are needed in the DevOps-based IT revolution, EF570 supports a RESTful web services API along with Java and Python client libraries. Modules for Puppet, Chef, and Ansible are available for open-source orchestration and configuration management. And for easy integration and automation in traditional IT and Windows ecosystems, EF570 also supports Windows PowerShell and SMI-S 1.6.

Container Microservices
NetApp SANtricity container microservices is a Linux-based Docker Container service for preapproved OEM partners to embed applications on the EF570. It enables cost-effective converged infrastructure for targeted workloads. Examples include applications related to analytics, video surveillance, and HPC workloads.
**ASHRAE Compliant**
EF570 systems meet the certification requirements of the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE), a global society that advances human well being through sustainable technology for the built environment. The EF570 is ASHRAE A4 compliant.

**About NetApp Services**
**Gain greater business value from your investment**
Whether you're planning your new storage system, need specialized know-how for a major storage deployment, or want to optimize the operational efficiency of your existing infrastructure, NetApp Services and NetApp certified partners can help. Learn more about NetApp Services.

**About NetApp**
NetApp is the data authority for hybrid cloud. We provide a full range of hybrid cloud data services that simplify management of applications and data across cloud and on-premises environments to accelerate digital transformation. Together with our partners, we empower global organizations to unleash the full potential of their data to expand customer touchpoints, foster greater innovation and optimize their operations.
