Product type
Storage Shelf sold as part of a storage system

Manufacturer’s name, registered trade name, and registered address
NetApp
NetApp, Inc.
1395 Crossman Ave.
Sunnyvale, CA 94089
United States
+1 408-822-6000

Product model number
NAJ-1501 DS224C
NAJ-1502 DS212C

First year of manufacture
2016

Secure data deletion information: FAS and AFF
Storage Shelf must be installed as part of a storage system.

Starting with ONTAP 9.4, you can use the secure-purge feature with advanced privilege to nondisruptively “scrub” data on NVE-enabled volumes. Scrubbing data on an encrypted volume ensures that it cannot be recovered from the physical media. The following command securely purges the deleted files on vol1 on SVM vs1: cluster1:~> volume encryption secure-purge start -vserver vs1 -volume vol1 Starting with ONTAP 9.7, NAE and NVE are enabled by default. If the VE license is in place, either OKM or external key managers are configured, and NSE is not used, then NAE and NVE are enabled by default. NAE volumes...
are created by default on NAE aggregates, and NVE volumes are created by default on non-NAE aggregates. This can be overridden by entering the following command: `cluster1::*> options -option-name encryption.data_at_rest_encryption.disable_by_default true` For more information about NSE, NVE, NAE, OKM, and external KMIP servers, see NetApp Encryption Power Guide in the ONTAP 9 Documentation Center.

Clean up data spills quickly with NetApp secure_purge - analyst review

Material ease of disassembly for repair or reuse

FAS and AFF: [https://docs.netapp.com/platstor/index.jsp](https://docs.netapp.com/platstor/index.jsp)

Neodymium in HDDs

- All 10K RPM and 15K RPM drives have less than 5 g
- All 7200 RPM drives have between 5g and 25g

Cobalt in Li-Ion Batteries – No Batteries
